Oracle SAP Solution Center Walldorf

Oracle Reorganisation

- 
- ✍ **Why to reorganize**
 - ✍ **Traditional Space Management**
 - ✍ **New Automatic Space Mangement**
 - ✍ **Locally Managed Tablespaces**
 - ✍ **Using Parallel Processing**

Why to Reorganise

Number of Extents

Space Fragmentation
in Tablespace

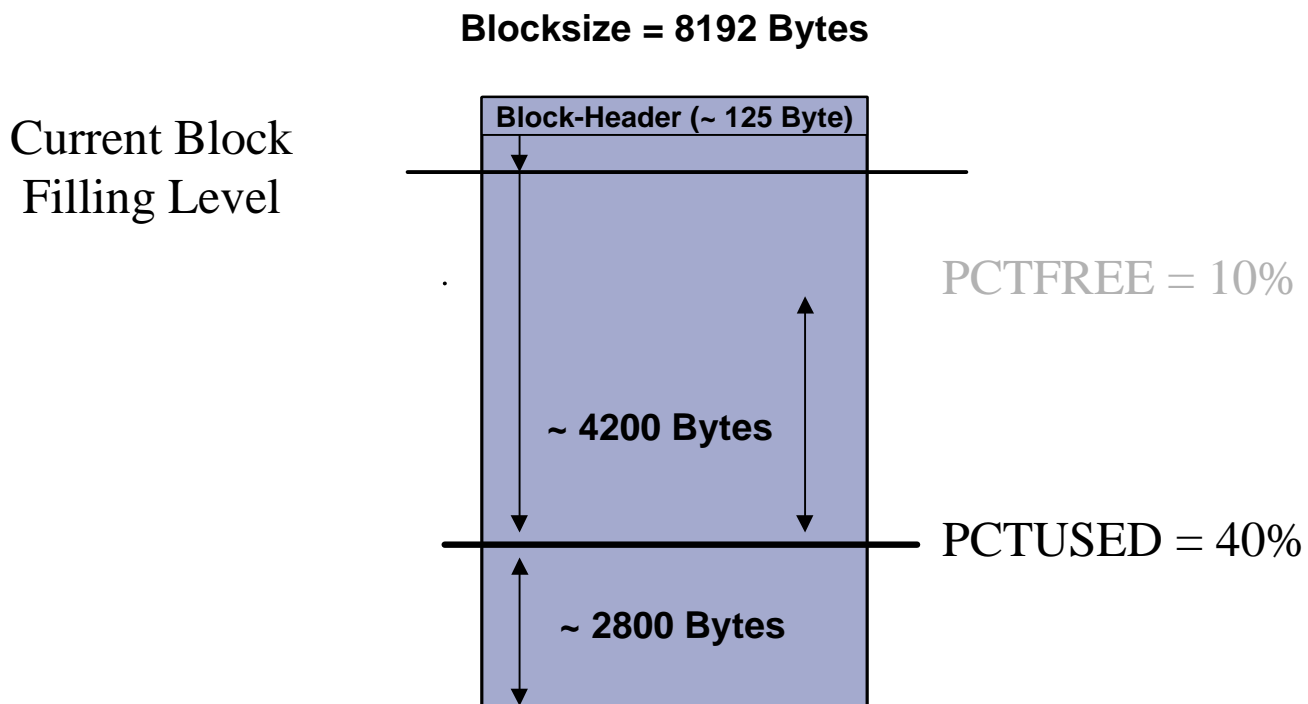

Archiving

- 
- ✍ Why to reorganize
 - ✍ **Traditional Space Management**
 - ✍ New Automatic Space Mangement
 - ✍ Locally Managed Tablespaces
 - ✍ Using Parallel Processing

Space Management Oracle: Insert/ Update

Space Management Oracle: Delete

Archiving Procedure

DELETE FROM EDIDC WHERE CREDAT < 01.01.2003

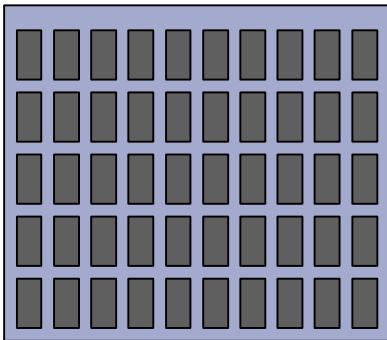

DELETE FROM EDIDC WHERE CREDAT < 01.01.2003 and WERKS = 001

Influence on Data distribution

DELETE FROM EDIDC WHERE
CREDAT < 01.01.2003

DELETE FROM EDIDC WHERE
CREDAT < 01.01.2003
AND WERKS = 001

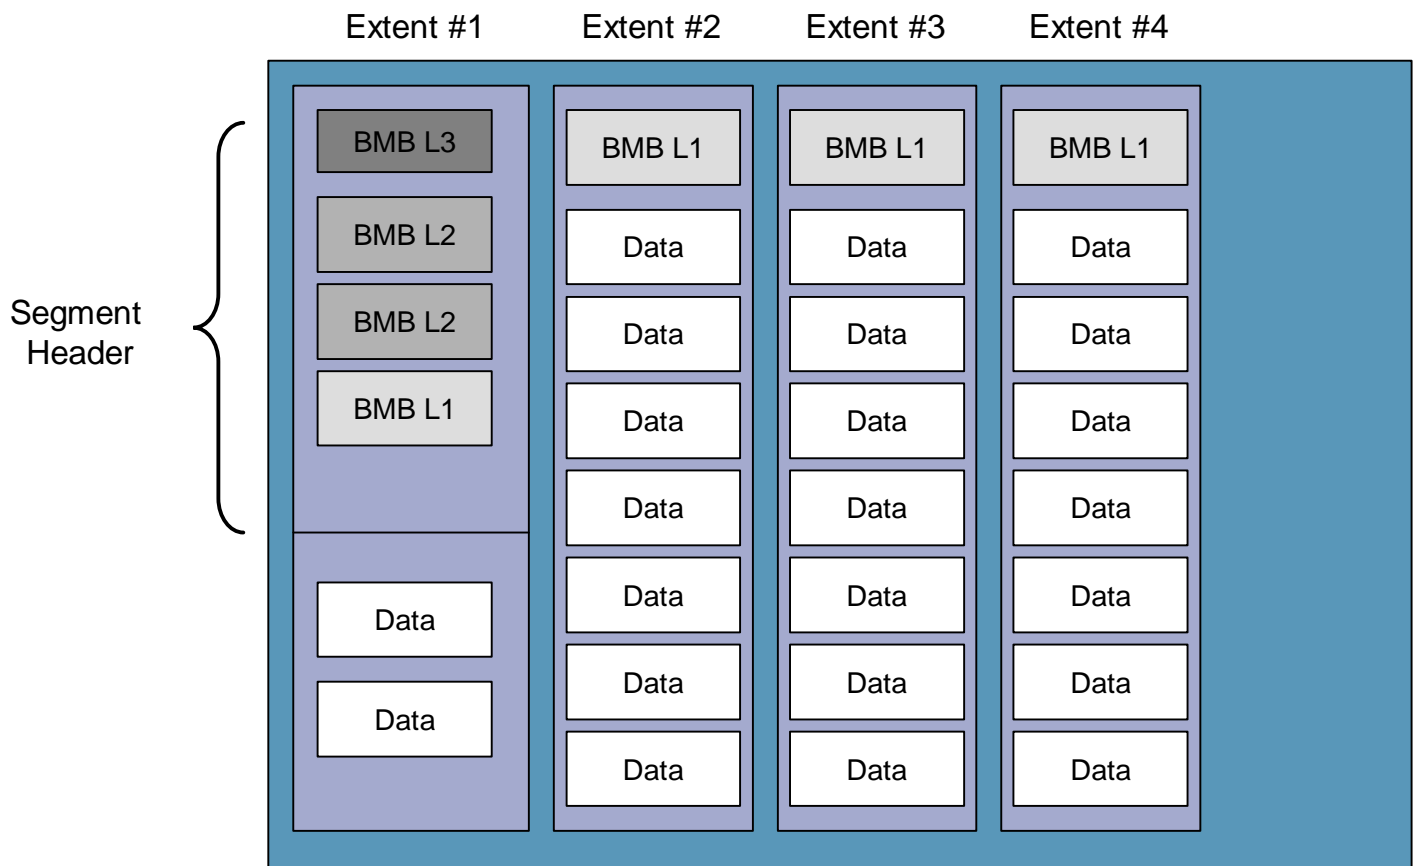

- 
- ✍ Why to reorganize
 - ✍ Traditional Space Management
 - ✍ **New Automatic Space Mangement**
 - ✍ Locally Managed Tablespaces
 - ✍ Using Parallel Processing

Automatic Space Management: Features

- ✍ **Ease of Use**
=> No PCTUSED, FREELISTS, FREELISTS
- ✍ **Better space utilization**
=> Freed space is reused immediatly
- ✍ **Better concurrency handling**
=> No contention on parallel processing
- ✍ **Better performance**
=> Faster seek operation for free space

Automatic Segment Space Management

BMB: Bit-Mapped Block

BMB: Internal Structure

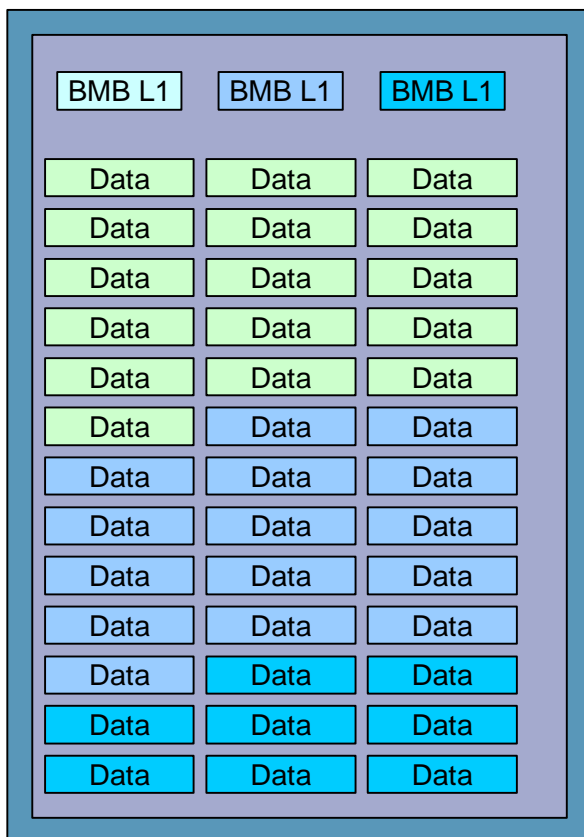

```
Freeness Status: nf1 1  nf2 1  nf3 0  nf4 11  First free datablock : 3
Bitmap block lock opcode 0
Locker xid:   : 0x0000.000.00000000
  Highwater:: 0x01000021  ext#: 0  blk#: 16  ext size: 16
#blocks in seg. hdr's freelists: 0
#blocks below: 13
mapblk 0x00000000  offset: 0
HWM Flag: HWM Set
-----
DBA Ranges :
-----
0x01000011 Length: 16  Offset: 0
0:Metadata 1:Metadata 2:Metadata 3:75-100% free
4:75-100% free 5:75-100% free 6:75-100% free 7:75-100% free
8:75-100% free 9:75-100% free 10:75-100% free 11:0-25% free
12:25-50% free 13:75-100% free 14:75-100% free 15:75-100% free
```

```
nf1 = block is 0-25% free
nf2 = block is 25-50% free
nf3 = block is 50-75% free
nf4 = block is 75-100% free
```

Automatic Segment Space Management

Extent

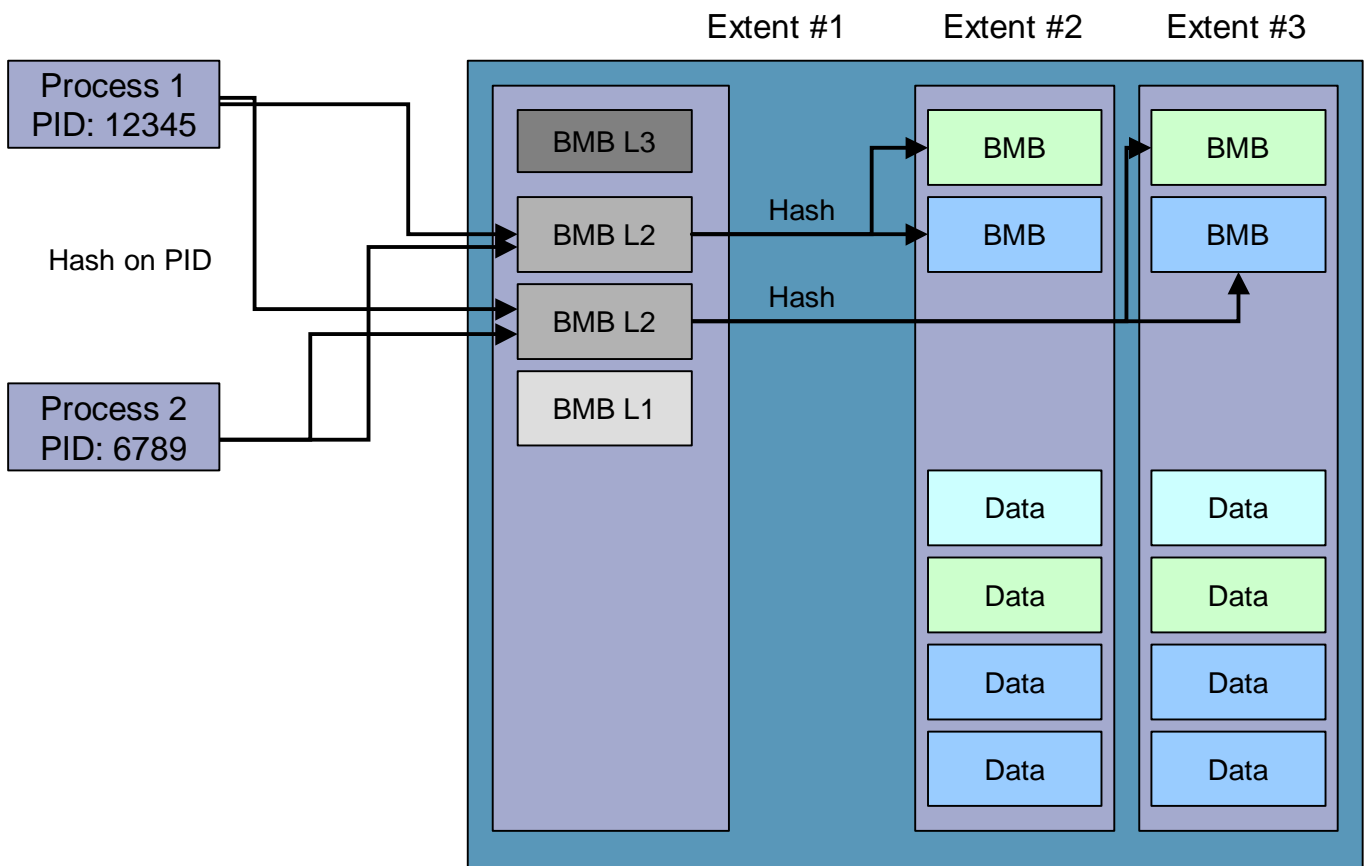

BMB: Bit-Mapped Block

Each BMB controls up to:

- => 16 blocks until the segment is 1Mb
- => 64 blocks until the segment is 32Mb
- => 256 blocks until the segment is 1Gb
- => 1024 blocks once segment is >1Gb

Automatic Segment Space Management

BMB: Bit-Mapped Block

Influence on Data distribution

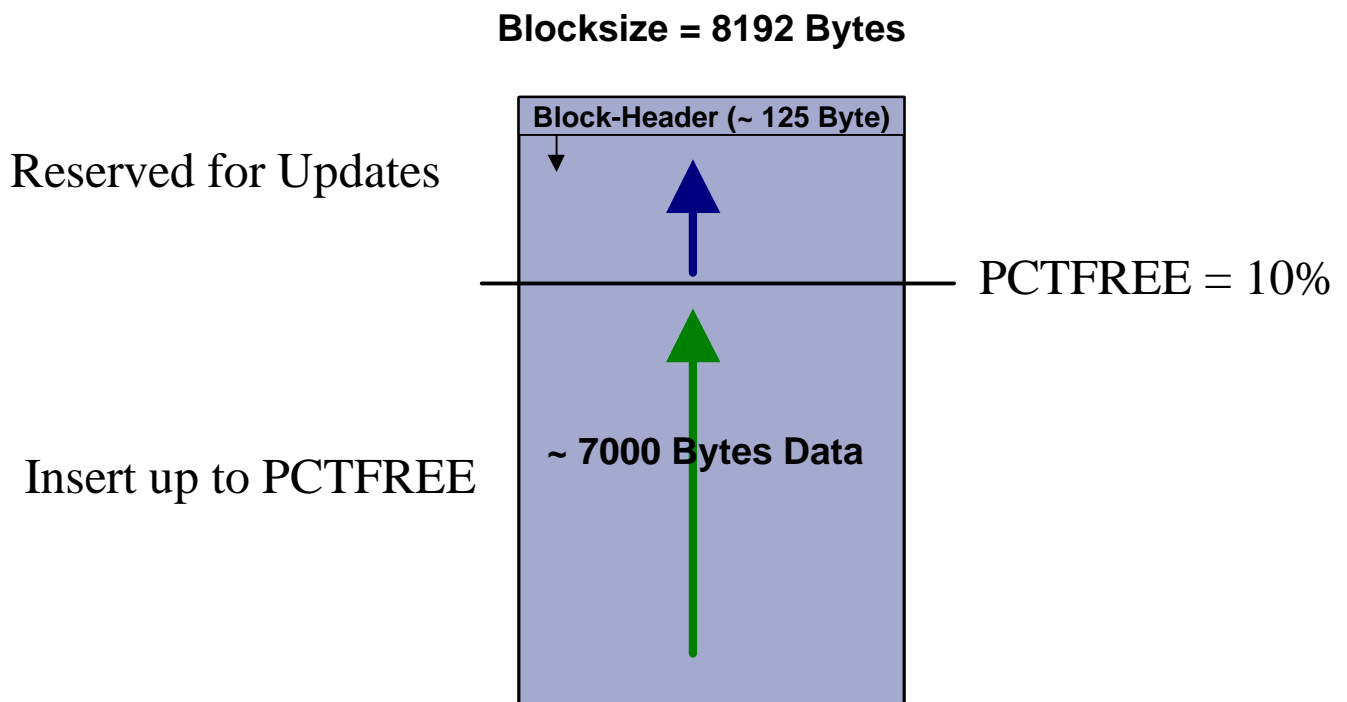

DELETE FROM EDIDC WHERE
CREDAT < 01.01.2003

DELETE FROM EDIDC WHERE
CREDAT < 01.01.2003
AND WERKS = 001

Space Management Oracle: Insert/ Update

Performance ?

or

Space ?

Summary Automatic Space Management

- ✍ **Improved performance for parallel load**
- ✍ **Less administration**
- ✍ **Easy to reuse space**
- ✍ **Increased Data distribution on blocks**

- 
- ✍ Why to reorganize
 - ✍ Traditional Space Management
 - ✍ New Automatic Space Management
 - ✍ **Locally Managed Tablespaces**
 - ✍ Using Parallel Processing

Locally Managed Tablespaces

Dictionary Managed

Insert, Update, Delete

FET\$, UET\$

System Tablespace

Locally Managed

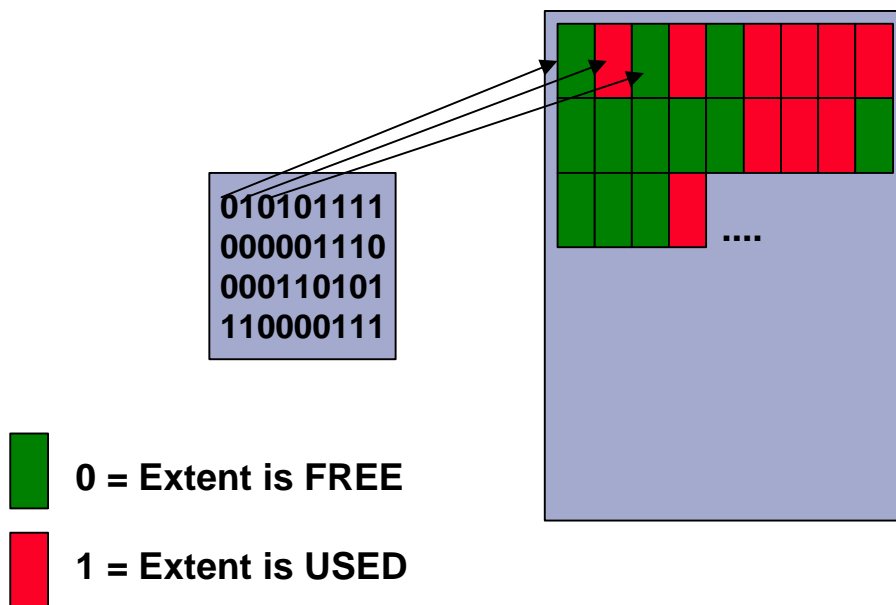

System Tablespace

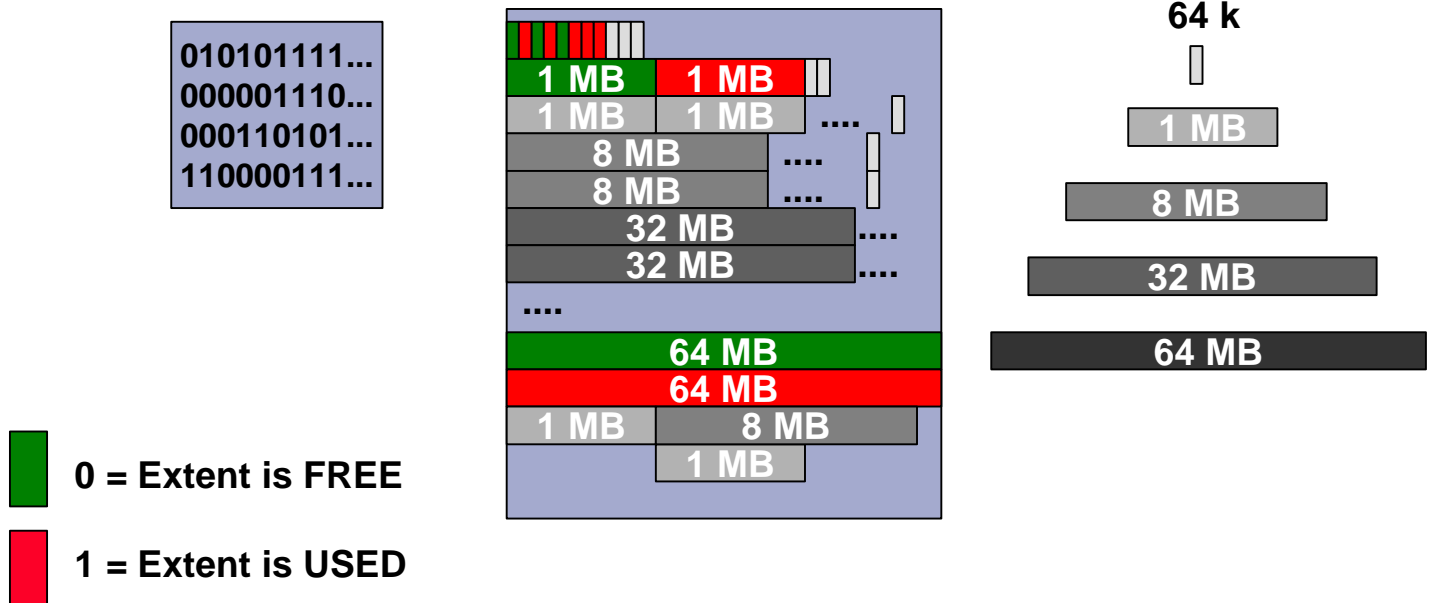

Internal Structure of Locally Managed TBS

Uniform Size: All Extents have the same size

Internal Structure of Locally Managed TBS

Autoallocate: 5 different extent sizes will be used

Advantages of Locally Managed Tablespaces

- ✍ **No Initial or Next Extent Definition necessary**
- ✍ **No space fragmentation, forced by very different extent sizes (16K – 2GB)**
- ✍ **Better usage of available space within the tablespace**
- ✍ **No Extent limitation**
- ✍ **Number of Extents has no impact on the system performance**
- ✍ **Better performance during insert/ delete operations and parallel load**

Reorganisation Methods

- ✍ **Export/ Import**
- ✍ **Create Table As Select (CTAS)**
- ✍ **Online-Index Reorganisation**
- ✍ **Online-Table Reorganisation (Oracle 9i only)**

- 
- ✍ Why to reorganize
 - ✍ Traditional Space Management
 - ✍ New Automatic Space Mangement
 - ✍ Locally Managed Tablespaces
 - ✍ **Using Parallel Processing**
